Applied AI/ML • AI for Science • Bioinformatics • Data Mining

Research Summary

Researcher combining bioinformatics and applied AI/ML. Work spans interpretable pathogen genomics, protein representation learning, generative-AI evaluation, and large-scale recommendation systems. Experience connects experimental science, model development, and evaluation in research and production settings.

Education

University of California, Davis

Ph.D. *2020–2026*

Research: Applied Bioinformatics, Applied AI/ML, and Data Mining. Advisor: Luxin Wang; co-advised by C. Titus Brown and Jiawei Zhang. GPA: 3.97/4.00.

University of California, Davis

Master's degree, Computer Science *2023–2025*

GPA: 3.91/4.00.

Columbia University

Master's degree, Biotechnology *2019–2020*

Thesis-based program. GPA: 3.84/4.00.

University of California, Davis

Bachelor of Science *2019*

GPA: 3.59/4.00; major GPA: 3.62/4.00.

Highlighted Research Directions

Interpretable machine learning for microbial genomics

Combined pangenome analysis and ML/deep learning to distinguish clinical from environmental Vibrio parahaemolyticus isolates. Led investigation, data curation, methodology, formal analysis, and drafting; used model interpretation to prioritize candidate genes for biological investigation.

Protein representation learning and structural analysis

Combined curated TDH/TRH sequences, ESM2 embeddings, and AlphaFold2 predictions to investigate toxin divergence. Used clustering and sequence–structure analysis to develop hypotheses relevant to experimental strain selection.

Pathogen transcriptomics and aquaculture microbiomes

Investigated Vibrio survival and gene-expression responses in seawater at shellfish harvesting temperatures. Contributed to studies of florfenicol-associated changes in catfish microbiota and antimicrobial-resistance questions in aquaculture.

Microbial safety of alternative proteins, produce, and dried fruit

Studied pathogen and spoilage-organism behavior in plant-based meat analogues and ground beef; evaluated microbial control during dried-fruit preparation and storage. Contributed to pathogen studies on citrus fruits and mushrooms.

Editorial Appointment

Microbiome Data Science, Frontiers in Microbiology

Review Editor *September 2026–present*

Appointed to the section editorial board to review manuscripts in computational, statistical, and informatics approaches to microbiome research.

Industry Experience

Meta Platforms

Ph.D. Intern, Machine Learning — *June 2026–present*

Developed LLM-based music and creator recommendation systems for content creation. Built pipelines for semantic tokenization, supervised fine-tuning, preference optimization, and online evaluation; **designed Atomic Creator Tokens for creator recommendation**.

Capital One, McLean, VA

Ph.D. Data Science Intern, AI Foundation — *June–August 2025*

Investigated graph representation learning using data from **approximately two million customers** to predict shared accounts and support customer modeling and fraud-risk analysis.

Metagenomi, Emeryville, CA

Machine Learning Intern — *June–September 2024*

Developed preprocessing, feature engineering, and ML/deep-learning models for CRISPR nuclease indel profiles and gene-editing outcomes using internal screening data.

Publications

† Equal contribution / co-first author. Publication status is indicated for each entry; published versions and earlier preprints are listed together. Impact Factor: the journal's highest Clarivate Journal Citation Reports value, with its data year.

1. [Preprint] **Liu, Zhuosheng**, Zhou, Y., Liu, C., Brown, C. T., & Wang, L. (2026). How thermostable direct haemolysin (TDH) diverges from TDH-related haemolysin (TRH)? Reassessing haemolysins in Vibrio parahaemolyticus through functional and structural representation learning. bioRxiv; posted September 3, 2026. doi: 10.64898/2026.09.02.748974

Survival of common foodborne pathogens on dried apricots made with and without sulfur dioxide treatment. **Food Control**, 121, 107569. **Impact Factor: 7.0** (2025). doi: 10.1016/j.foodcont.2020.107569

16. [Technical report] Li, Z., **Liu, Zhuosheng**, & Zhang, J. Parameter-Efficient Fine-Tuning for Vision-Language Models. Technical report

Research Affiliations

Information Fusion and Mining Laboratory, UC Davis

Research contributor *May 2023–present*

Research on parameter-efficient fine-tuning for vision-language models and evaluation of AI-generated video.

Luxin Wang Laboratory, UC Davis

Doctoral research *2020–2026*

Experimental and computational investigations of pathogen survival, microbial genomes, and microbiomes.

Technical Expertise

AI/ML: PyTorch, TensorFlow, scikit-learn, Hugging Face; LLM fine-tuning, LoRA, PEFT, DPO, and GRPO, multimodal representation learning, graph learning, generative recommendation, and model evaluation.

Programming and systems: Python, R, C/C++, Java, SQL, Scala, Perl, Bash; NumPy, pandas, Spark/PySpark, PostgreSQL, Linux, Git, Docker, AWS, FSDP, and vLLM.

Bioinformatics & Experimental Methods

Snakemake workflows; RNA-seq, 16S rRNA sequencing, whole-genome and pangenome analysis; Biopython; ESM2 protein embeddings, UMAP/t-SNE, and AlphaFold2 structure prediction.

NGS library preparation, qPCR, PCR, microbial culture, and pathogen challenge studies.

Research Recognition

Sweden's Food Agency discussed the plant-based-meat study and **reproduced measured product pH values in its 2025 microbiological risk assessment** of plant-based alternatives.

A 2024 **Eurosurveillance** report on a Finnish hospital outbreak **cited the plant-based-meat study as evidence** that pea-protein alternatives can support Listeria growth.

Frontiers in Marine Science: "Proteomics and metabolic profiling of Vibrio parahaemolyticus at three different temperatures" (published 2025). **Named reviewer.** doi: 10.3389/fmars.2025.1689231

Honors & Awards

Margrit Mondavi Student Support Fellowship, UC Davis — 2025

LUGG Graduate Student Award, UC Davis — 2024

Jastro-Shields Research Award / Peter J. Shields and Henry A. Jastro Research Award, UC Davis — 2021–2024

First Place, NCIFT Student Poster Competition — 2023

James and Marilyn Lugg Graduate Student Award, UC Davis — 2022, 2023

Fresh Express Incorporated Graduate Student Support Fund, UC Davis — 2022, 2023

Victor Chu Endowment, UC Davis — 2022

Bor Luh Scholarship; George Stewart Memorial Award, UC Davis — 2021

Doctoral Student Fellowship, UC Davis — 2020

Departmental Master's Student Scholarship, Columbia University — 2019

Third Place, CAFPNA Student Presentation Competition — 2019

Marie and William Cruess Scholarship, NCIFT — 2019

Departmental Citation for Outstanding Performance; Undergraduate Research Travel Award, UC Davis — 2019

Provost's Undergraduate Research Fellowship, UC Davis — 2018

Teaching Experience

UC Davis

Teaching Assistant / Learning Assistant — *2017–present*

Graduate Teaching Assistant in Computer Science (from 2024; ECS 122A Algorithm Design and Analysis, approximately 600 students) and Microbiology / Food Science (from 2021; FST 104L and MIC

103L laboratory instruction, FST 10 with approximately 300 students, and FST 100B discussions); Undergraduate Learning Assistant (2017–2019) for MIC 103 laboratory coursework and the CHE 2 general chemistry series.
